

## Superior Appearance, Quality and Performance

Our Willmar® Collection windows (ES3500, ES7000) are now available with Finishield™ Colour Technology. Finishield™ is a durable, UV and weather resistant film that is superior to traditional paint in appearance, quality, and performance.

### PROTECT YOUR INVESTMENT AGAINST SOLAR HEAT BUILD-UP

Dark coloured windows are extremely popular but dark colours also absorb more solar energy and are exposed to extreme heat build-up. In some instances extreme heat build-up on a painted window surface can lead to a finish that looks faded. Extreme heat build-up can also cause potential hardware issues or even issues with a window's structural integrity. Finishield™ is new colour technology from JELD-WEN® which has reflective properties to reduce heat build-up, protecting both the surface finish and the vinyl beneath.

### SUPERIOR FINISH DURABILITY FOR LASTING BEAUTY

Finishield™ provides a more durable surface than traditional paint applications and resists scratches, cracking, and chipping that can occur during shipping and handling as well as during installation. With the latest in window colour technology, you receive a durable finish that maintains its original beauty.

### FEATURES

- Counteracts excessive heat build-up
- Scratch, crack and peel resistant
- More consistent appearance than traditional paint
- Easy to clean and virtually maintenance free
- Ideal for Canadian weather
